Otsuka Medical Devices Launches BioMimics 3D Vascular Stent System in Japan

Otsuka Medical Devices Co., Ltd., a fully owned subsidiary of Otsuka Holdings Co., Ltd., announced today that the BioMimics 3D Vascular Stent System for patients with peripheral vascular disease is now available in Japan.

The BioMimics 3D Vascular Stent System is indicated to maintain patency of lumen during an endovascular intervention for patients with symptomatic peripheral arterial disease in the superficial femoral artery and/or proximal popliteal artery (femoropopliteal artery).

It is also used for the treatment of acute or impending occlusion of the treated site associated with unsuccessful intervention treatment.

Reference vessel diameters: 4 - 6mm Lesion lengths: 40 - 140mm

The BioMimics 3D Vascular Stent System is already available in Europe and the U.S. from its developer, Veryan Medical Ltd. (UK).
